ISMAEL SARMIENTO · CV ONLINE

Head of Data Management

Governance, Interoperability & Data Quality

I design and build governed, reliable data and AI platforms that help organisations make better decisions and grow with real impact.

- Internal growth at Savana: Senior Data Engineer → Lead Data Engineer → Head of Data Management
- Clinical interoperability with HL7 FHIR and OMOP CDM, and data quality aligned with UNE 0081
- Leading high-performing teams
- CDMP (Associate) certified by DAMA International and active member of DAMA Spain
- Technical profile focused on product and scalability

SUMMARY

Executive summary

At Savana, I design and evolve data products and platforms where engineering, governance, and interoperability work together to make data useful, traceable, and trustworthy.

My focus is on turning complex integration, quality, and analytics needs into real product capabilities: cataloging, metadata, validation, observability, visualization, and lifecycle control.

I combine hands-on execution, architectural judgment, and technical leadership to translate regulated environments and complex requirements into more solid, reusable systems that are ready to generate value.

WHAT I BRING

Governance applied to product

I design reusable capabilities for cataloging, metadata, quality, and operational control, not isolated pipelines.

WHAT I BRING

Clinical interoperability with purpose

I connect operational data exchange and advanced analytics through standards such as HL7 FHIR and OMOP CDM.

WHAT I BRING

Quality, traceability, and control

I work across the full data lifecycle, from ingestion and validation to monitoring, blocking, or deletion.

ABOUT

About

I work at the intersection of data engineering, data governance, and product. My focus is on turning complex requirements into stronger, auditable, interoperable platforms that create real value for technical and business teams.

I specialize in data governance, interoperability, and end-to-end quality, building solutions that connect metadata, cataloging, validation, observability, and operational control at scale. I hold the CDMP (Associate) certification from DAMA International, I am an active member of DAMA Spain and keep my expertise current through continuous learning, certifications, and hands-on work.

I also see documentation, mentoring, and knowledge transfer as essential parts of technical scalability and strong teams.

CURRENT POSITION

Head of Data Management at Savana · Governance, interoperability and data quality

CONTEXT

Data platforms, clinical standards, governance, and lifecycle management.

WORKING STYLE

Hands-on delivery, architectural judgment, and team leadership.

MAIN STORY

Savana

From data engineering to leading Data Management

At Savana, I moved from a hands-on engineering role to leading the Data Management area, with a cross-functional view of data quality, interoperability, and governance, while staying close to solution design and product thinking.

I drove interoperability capabilities around HL7 FHIR, the modern HL7 specification for healthcare data exchange, and OMOP CDM, the common data model promoted by OHDSI for standardization and advanced analytics. This allowed me to connect operational integration, analytics enablement, and real business needs across the clinical data ecosystem.

I also designed and evolved a data quality platform from scratch, aligned with the UNE 0081 data quality standard and built on open source tooling, until it became a reusable capability ready for API-based integration. This was complemented by metadata and catalog centralization on DataHub, as well as lifecycle monitoring and visualization solutions, including the evolution of the Data Model Explorer from Power BI to Apache Superset.

This work was completed by data offboarding processes focused on compliance, security, and operational control, making it possible to track data from ingestion to blocking or deletion.

PROGRESSION

- **Head of Data Management** — CURRENT
- Lead Data Engineer
- Senior Data Engineer

CURRENT FOCUS

- Clinical interoperability with HL7 FHIR and OMOP CDM
- Data quality as a product capability
- Catalog, metadata, and lineage on DataHub
- Lifecycle management and data offboarding

FEATURED CASES

Featured cases

Three capabilities that explain my value better than a simple list of technologies.

QUALITY AS A PRODUCT

Data Quality Platform

I designed a Data Quality platform from scratch, built on open source tooling, aligned with the UNE 0081 data quality standard, and evolved into a reusable capability ready for API-based integration.

- End-to-end validation, traceability, and observability
- Ready for programmatic use and reuse by other teams
- Built as a technical product, not as scattered controls

CLINICAL EXCHANGE AND ANALYTICS

Clinical Interoperability

I drove clinical data transformations toward FHIR and OMOP to connect operational exchange, semantic normalization, and advanced analytics on a more consistent and reusable foundation.

- FHIR for electronic healthcare information exchange
- OMOP CDM for standardization and advanced analytics
- A bridge between operational integration and downstream value

VISIBILITY AND CONTROL

Data Lifecycle Management

I helped provide visibility and control across the full data journey, from ingestion and monitoring to Data Offboarding, with operational metrics, traceability, and compliance in place.

- Data Model Explorer as a visibility layer for the lifecycle
- Evolution from Power BI to Apache Superset
- Data Offboarding processes focused on security and compliance

TIMELINE

Compact career path

Savana
2022–present

Head of Data Management

Senior Data Engineer (2022), Lead Data Engineer (2023) and Head of Data Management (2025). Clinical interoperability with HL7 FHIR and OMOP CDM, data quality aligned with UNE 0081, catalogue and metadata in DataHub, and data lifecycle management.

StratioBD
2021–2022

Data Engineer

I strengthened an end-to-end understanding of data by working on a platform that connected ingestion, processing, modeling, governance, observability, and analytics. I designed integration and analytics processes on Apache Spark and worked on use cases where data needed to be reliable, explainable, and operable at scale.

Santander Global Tech
2020–2021

Software Engineer

I contributed to a high-performance banking platform across batch and streaming environments, working with technologies such as Apache Spark, Apache Flink, Apache Kafka, and Hazelcast in contexts where operational reliability was critical.

BBVA Next Technologies
2018–2020

Software Developer

I participated in the modernization of data solutions for pensions, investment funds, and corporate analytics, connecting automation, cloud, and business utility in migrations from on-premise environments to AWS.

Autana Consultores de Tecnología
2017–2018

Junior Software Developer

My first professional stage in social and geographic analytics, where I built an early foundation in data processing, business context, and solution delivery.

CREDENTIALS

Credentials and education

Certifications

- CDMP Certification – Associate · DAMA International (2026)
- FHIR Foundational Implementer · VICO Open Modeling (2025)
- SNOMED CT Terminology Fundamentals · SNOMED International (2026)

Specialised training

- Expert in Data Governance and Strategic Data Management · Mondragon Unibertsitatea (2024)
- Building Data Lakes on AWS · Amazon Web Services (2022)
- AWS Certified Solutions Architect – Associate (SAA-C03) preparation course · Udemy (2023)
- Big Data Management, Technologies and Analytics · Red.es (2017–2018)

Education

- Automation Engineer · Technological University of Havana «José Antonio Echeverría», CUJAE (2012–2017)
- Industrial Technical Engineer · University of Las Palmas de Gran Canaria (2023–2025)

Community and teaching

- Active member of DAMA Spain
- Founder of IsAcademy (2023), an online academy for programming, data and AI
- Internal training for technical teams throughout my career
- Mentoring people who want to move into the data field

ECOSYSTEM

Ecosystem

Standards, frameworks and technologies I work with, grouped by what they solve.

Clinical interoperability
HL7 FHIR
OMOP CDM
SNOMED CT

Data governance
DAMA-DMBOK
CDMP
DAMA Spain
DataHub

Data quality
UNE 0081
Validation
Observability
Data Offboarding

Platform and cloud
AWS
Apache Spark
Apache Airflow
Apache Superset

Artificial intelligence
Generative AI
AI agents
Multi-agent validation
